SUBJECT: Recommendation for Hridyanshu

I want to thank you for the opportunity to tell you about Hridyanshu whom I met as part of the NASA Lunar Loo Challenge run by HeroX in 2020. Hridyanshu was part of the winning team in the Junior category of the crowdsourced innovation and I was really impressed with the level of detail and thought he and his team brought to the challenge. It was inspiring to see this young student have such a comprehensive knowledge of the aspects of human spaceflight and understanding of the challenges for a waste management system. They considered not just the mundane functions of the toilet system but also the safety aspects and human factors of the system interface which was above and beyond what the judges expected when we released this challenge for the under 18 crowd. Hridyanshu's knowledge of CAD and mechanisms shined in the presentation as he was in charge of the system layout and had to factor in the fluid dynamics, safety and packaging to meet the stringent mass, volume and power constraints of the Lunar Loo. It was very impressive the complete and thorough concept they submitted and why they took home first prize for their Junior category. I would say his enthusiasm for innovation and technical knowledge that we saw in the presentation even surpassed some of the adult submissions of the Lunar Loo challenge and I am confident that he will be an asset to any university he attends. I look forward to seeing what he will achieve in the future as he learns and grows over his time at college.

It was my pleasure to recommend him and you would be ill advised to ignore his credentials. The hard work I saw on the Lunar Loo challenge and qualifications make him the quintessential engineering student that I feel confident you will agree with. I want to thank you for your time and cooperation in this matter. If you need any further input or have any questions feel free to contact me.

Sincerely,

Michael Angelo Interbartolo ^{III}
